BLUMARK'S 3RD ANNUAL HOLIDAY FUNDRAISER

Maxwell John Pardington died on June 10, 2014 from "Hypertrophic Cardiomyopathy" otherwise known as an enlarged heart. One quick, easy procedure could have spotted this defect in his heart, and he might still be alive today. However, since there were no outward signs or symptoms to let anyone know that anything was wrong, Max never received an echocardiogram or EKG. **Our goal is to give 100 EKG screenings to student athletes across Michigan. Each screening is only \$25 and 100% of each donation goes towards the cause (not administration fees).** We would be honored if you would like to donate to this cause.

Checks given to Blumark will be forwarded at the end of December to the foundation on your behalf. A tax receipt will be mailed to you. Online donations will receive a tax receipt immediately. Thanks for your consideration.
